

EazyMuxer Multiplexer/Demultiplexer

The multiplexer-demultiplexer of transport streams broadcasted through ASI/IP interfaces of SL NEO servers, with an additional Time Shift for TS function.

Launching Several Services

Starting from [2.5.1](#) version, the option of launching several EasyMuxer at one server is available.

The command line format for launching several apps: C:\Program Files (x86)\SL NEO Media Platform\eazymuxer.exe N, where N is the sequence number of the launched copy.

Example:

- eazymuxer.exe 1
- eazymuxer.exe 2
- eazymuxer.exe 3

Calculating the [port number](#) for connecting a random EasyMuxer copy to a web-interface is implemented by the formula: $7801 + 2 * (N - 1)$, where N is the sequence number of the launched copy.
