

Connecting Network Disks in Windows

Right-click the Computer icon on the desktop or in the Start menu
to open the network disks connection wizard.

Parameter	Value	Description
Disk	Select disk letter	Available disk letters are displayed. You can select any free letter, e.g. N: for the network NAS storage.
Folder	Line	Path to the network resource, for example: \\IP_ADDRESS\share
Restore at login	ON or OFF	Setting this parameter allows automatic network disk connection when logging to the system after reboot.
Use other user data	ON or OFF	Setting this parameter is necessary, if login to the network resource is implemented under the account different from the one under which you're logged to Windows. If this parameter is selected, pressing the Next button will display a password entry dialog.

Network password entry

Parameter	Value	Description
User	Line	
Password	Line	User password at the network resource.
Domain	Defined automatically	Defined automatically, can be changed from the User field.
Remember me	ON or OFF	Set this value, if you need to remember the password.
